# Brand New! ITS JPO Unveils the 2004 ITS Deployment Statistics Website

Now Available! The ITS Joint Program Office's ITS Deployment Statistics website is redesigned and updated with the new 2004 deployment data, gathered in a national survey in the summer and fall of 2004. The newly redesigned website can be accessed at www.itsdeployment.its.dot.gov. It has a new look and feel, offering fast and easy access to the deployment data.

Traditionally, the Deployment Statistics website has been the most reliable resource for comprehensive ITS deployment statistics over the years, and this trend continues with the latest round of deployment data made public. The latest deployment survey covered some 2300 transportation agencies in 108 metropolitan areas, and each of the 50 states. Deployment information provided by the website integrates results from 12 surveys, listed below:

Metropolitan Applications/Organization	**Rural/Statewide Applications**
Arterial Management	Crash Prevention and Safety
Freeway Management	Operations and Maintenance
Transit Management	Surface Transportation Law
Public Safety - Law Enforcement	Traffic Management
Public Safety - Fire/Rescue	Traveler Information
Electronic Toll Collection	
Metropolitan Planning Organizations	

The website supports online searches for information and enables download of a variety of reports and summaries covering metropolitan and statewide/rural deployment. The website features quick access to data broken out by three different views – National, Metropolitan, Individual Agency – in just a click of the mouse. Users can employ a keyword search or select individual items from a survey outline to access information on different technologies, application areas, or geographic areas. The site also provides national trend information from earlier surveys as well as access to all results from previous surveys.

A variety of reports is available for download, including:
- Summaries for each survey type
- Individual metropolitan site reports
- One-page fact sheets covering key deployment results for each metropolitan area and state surveyed
- A national summary report for metropolitan and statewide deployment.
